# How We Can Work Together

1. Design programs that meet your needs
  - Popular styles and native plants in your area;
  - Group programs;
  - Encompass all features you desire:
    - Rainwater capture and reuse
    - Maximize drip irrigation, reduce evaporation
2. Assist in your education effort
  - Provide educational content about water efficient gardening:
    - Plant native plants;
    - Capture and reuse rainwater;
    - Improve groundwater quality;
    - Improve soil health for climate resiliency;
    - Support vital habitat for local ecosystem and biodiversity
  - Become a speaker for your education series
  - School programs

## Rain Garden – Turn Rain Into Beauty In Your Garden

When it rains, we enjoy hearing the sound of raindrops on our roof. After a drought of an hour or California, those drops sound more like music to our ears. While enjoying the music, have you thought about where the rainwater goes? Well, most of it just goes down the sewer, into the creeks and rivers, and eventually out to the ocean. What if that water is not sent away, but reused, such as, turned into beauty in your garden?
